

Bürkert Process Valves

Interactive 3D Catalogue of body types

Angle seat

Globe

Diaphragm

Starting with the body we can choose valves to control slurries, steam, aggressive liquids and materials which must remain pure.

Here you see three main methods for controlling fluids: Angle seat valves, globe valves and diaphragm valves.

To be able to use the 3D functionality of this interactive 3D product catalogue, you need an Adobe® Reader, at least version 8. Choose one of the valve types by left clicking the symbol, then the 3D document is opened.
